

EXP. NO: 1

Setting up the Python Environment and Libraries

AIM:

- To create a new notebook for Python
- To write and execute Python code
- To create new cells for code and Markdown
- To demonstrate the application of Jupyter Widgets

PROCEDURE:

1. Import ipywidgets and the display function from IPython.display.
2. Create an IntSlider with values ranging from 0 to 100.
3. Create an output widget to display the selected value.
4. Define a function to detect changes in the slider value.
5. Use slider.observe() to monitor value changes.
6. Display the slider and output area.
7. Move the slider and observe the updated value.

PROGRAM:

```
import ipywidgets as widgets
from IPython.display import display
slider = widgets.IntSlider(value=50,min=0,max=100,step=1,description='Value:')
output = widgets.Output()
def on_value_change(change):
    output.clear_output()
    with output:
        print(f"Slider value is {change['new']}")
slider.observe(on_value_change, names='value')
display(slider, output)
```

OUTPUT:

RESULT:

The interactive slider was successfully created using ipywidgets. The selected slider value was displayed dynamically whenever the slider was changed.
